Completed on	Sunday, 16 August 2026, 5:54 PM
Time taken	30 mins 11 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
```

```
    int s =1;
```

```
    while(s <= n)
    {
         i++;
         s += i;
     }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

```
#include <stdio.h>

int main()
{
    int n, i = 1, s = 1;
    int count = 0;

    scanf("%d", &n);

    while (s <= n)
    {
        i++;

        count++;
        s += i;
        count += 2;
    count++;

    }

    printf("%d", i*3);

    return 0;
}
```
